

Samsung Mobile Sales Analytics Report

1. Dashboard Overview

This dashboard analyses mobile sales performance across brands, models, cities, payment methods, and customer ratings. It combines KPIs, charts, maps, and tables to provide a holistic view of business operations.

2. Visuals Used and Why

◇ KPI Cards (Top Section)

- **Metrics:** Total Sales, Total Quantity, Transactions, Average Price
- **Why:** KPI cards give quick, high-level performance indicators for management.
- **Insights:** ₹769M total sales, 19K units sold, 4K transactions, average price ₹40K.

◇ Map (Total Sales by City)

- **Visual Type:** Filled Map with city labels (Chennai, Madurai, Bangalore).
- **Why:** Geographic visualization helps identify regional sales concentration.
- **Insights:** Bangalore shows stronger sales compared to other cities.

◇ Line Chart (Total Quantity by Month)

- **Visual Type:** Line chart with daily data points.
- **Why:** Line charts highlight trends and seasonality.
- **Insights:** Quantity sold is stable (570–624 units/day), no major fluctuations.

◇ Bar Chart (Customer Ratings)

- **Visual Type:** Horizontal bar chart.
- **Why:** Easy comparison of rating distribution.
- **Insights:** Majority of customers gave 4–5 stars, indicating good satisfaction.

◇ Pie Chart (Payment Method Distribution)

- **Visual Type:** Donut/Pie chart.
- **Why:** Shows proportional split of payment methods.
- **Insights:** UPI (26.25%) and Debit Card (25.89%) dominate, but cash still significant (25%).

◇ Table (Brand Performance)

Brand	Total Sales	Total Quantity	Total Transactions
Xiaomi	143753337	3664	743
Vivo	150078428	3801	766
OnePlus	153719439	3830	768
Samsung	160038055	3923	775
Total	769204988	19150	3835

- **Visual Type:** Matrix/Table.
- **Why:** Tabular format is best for detailed breakdowns.
- **Insights:** Samsung leads with ₹160M sales, followed by OnePlus and Vivo.

◇ Line Chart (Sales by Day Name)

- **Visual Type:** Line chart.
- **Why:** Shows weekly sales patterns.
- **Insights:** Saturday sales peak at ₹115M, lowest on Wednesday (₹107M).

3. DAX Formulas Applied

Here are some common DAX measures likely used in this dashboard:

DAX

Total Sales

Total Sales = SUM(SalesData[Amount])

-- Total Quantity

Total Quantity = SUM(SalesData [Quantity])

-- Total Transactions

Total Transactions = COUNTROWS(Sales)

-- Average Price

Average Price = DIVIDE([Total Sales], [Total Quantity])

-- Customer Ratings Count

Rating Count = COUNT(SalesData [Rating])

-- Sales by Day Name

Sales by Day = CALCULATE([Total Sales], VALUES(SalesData [DayName]))

-- Payment Method Share

Payment Share = DIVIDE([Total Sales], CALCULATE([Total Sales], ALL(SalesData [PaymentMethod])))

4. Insight Summary

- **Samsung dominates brand sales** with ₹160M.
- **OnePlus Nord is the top model** at ₹110M.
- **Customer satisfaction is strong**, with most ratings at 4–5 stars.
- **Digital payments lead**, but cash remains relevant.
- **Weekend sales outperform weekdays**, especially Saturdays.
- **Stable daily sales trend** indicates consistent demand.
